Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                    Soker S., Klagsbrun M.; "Identification of a natural soluble neuropilin-1 that binds vascular endothelial growth factor: In vivo expression and antitumor
                                                                                                      Gagnon M.L., Bielenberg D.R., Gechtman Z., Miao H.-Q., Takashima S.,
"Neuropilin-1 is expressed by endothelial and tumor cells as an isoform-specific receptor for vascular endothelial growth factor."; Cell 92:735-745(1998).
                                                                                                                                                                                                                                                                                                                                                                                                                                                        FUNCTION: The soluble isoform 2 binds VEGF-165 and appears to inhibit its binding to cells. It may also induce apoptosis by sequestering VEGF-165. May bind as well various members of the semaphorin family. Its expression has an averse effect on blood vessel number and integrity.
                                                                                                                                                                                                                                                                                                                                                                    outside the nervous system. It mediates the chemorepulsant activity of semaphorins. It binds to semaphorin 3A, The PLGF-2 isoform of PGF and VEGF-B. Coexpression with MDR results in increased VEGF-165 binding to as well as increased chemotaxis. It may regulate VEGF-induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBCELLULAR LOCATION: Type I membrane protein. The production of a cell surface protein,

The production of a cell surface protein,

THE PLOSA SYSTEM, IN ANDIOGENESIS OUTSIDE THE NERVOUS SYSTEM, IT MEDIATES THE CHEMOREDUSANT ACTIVITY OF SEMARHORINS. IT BINDS TO SEMARHORIN 3A, THE PLGF-2 ISOFORM OF PGF, THE VEGF-165

TISOFORM OF VEGF-1N OVEGF-B. COEXPRESSION WITH KOR RESULTS IN INCREASED VEGF-165

THE MAY REGULATE VEGF-INDUCED ANGIOGENESIS (BY SIMILARITY).

THE SUMELLULAR LOCATION: Type I membrane protein.

THE SIMILARITY: BELONGS TO THE NEUROPILIN FAMILY.

THE SIMILARITY: Contains 2 FS/8 type C domains.

-!- TISSUE SPECIFICITY: EXPRESSED IN DEVELOPING CNS, PNS AND IN SOME NONNEURAL TISSUES INCLUDING LIMB BUDS, DEVELOPING BONES, MUSCLES, INTERIAL TISSUES INCLUDING LIMB BUDS, DEVELOPING BONES, MUSCLES, INTERIAL ENTHELIUM, KIDNEY, LUNG AND SUBMANDIBULAR GLAND.
-!- DEVELOPMENTAL STAGE: THE EXPRESSION PATTERN IS VERY DYNAMIC AND IS DEVELOPMENTALLY REGULATED.
-!- SIMILARITY: COntains 2 CUB domains.
-!- SIMILARITY: Contains 2 F5/8 type C domains.
-!- SIMILARITY: Contains 1 MAM domain.
          -i- FUNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORINS 3C, 3F, VEGF-165
AND VEGF-145 ISOFORM OF VEGF, AND THE PIGF-2 ISOFORM OF PGF.
-i- SUBUNIT: NEUROPILIN-2 PROBABLY FORMS AN HETEROMERIC COMPLEX WITH
NEUROPILIN-1 IN ORDER TO BE A FUNCTIONAL SEMAPHORIN E RECEPTOR.
-i- SUBCELLUIAR LOCATION: Type I membrane protein.

vessels. May function in the formation of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and activates VEGRR-3 (Flt4) receptor (By similarity).

-!- SUBCELULIAR LOCATION: Secreted (By similarity).

-!- PTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward VEGRR-3 and VEGRR-2. VEGR-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGRP is composed mostly of two VEGR homology domains (VHDs) bound by non-covalent interactions (By similarity).

-!- SIMILARITY: BELONGS TO THE PDGF/VEGR FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright.
